

Hyprrland Cheat-Sheet chris-laptop

Super = the Windows / Super key

Apps & Session

Super + Return	 Terminal (kitty)
Alt + Space	 App launcher (wofi)
Super + D	 App launcher (alt)
Super + W	 Close focused window
Super + L	 Lock screen
Super + M	 Exit Hyprrland (to login)

Window Control

Super + V	 Toggle floating
Super + F	 Fullscreen
Super + P	 Pseudo-tile
Super + J	 Toggle split direction
Super + ←↑↓→	 Move focus
Super + Shift + ←→	 Move window in layout
Super + <i>drag</i> L/R mouse	 Move / resize window

Workspaces & Monitors

Super + 1 ... 0	 Switch to workspace 1–10
Super + Shift + 1..0	 Send window to workspace
Super + Ctrl + ←↑↓→	 Move workspace to that monitor
Super + S	 Toggle chat scratchpad
Super + Shift + M	... Re-run monitor setup (4K fix)

Media & Capture

Print	 Region screenshot → clipboard
Vol ± / Mute	 Volume (wpctl)
Bright ±	 Backlight (brightnessctl)

Layout Notes

- **Workspace 1** lives on the 4K, **2** on the 1080p; the rest float.
- Undock → pinned workspaces collapse to the laptop; re-dock → they snap back.
- Lid closed while docked = clamshell (internal panel off, stays awake).
- Chat apps (Slack/Discord/Signal/Teams) open on the **Super** + **S** scratchpad.

Handy Commands

```
hyprctl reload
  reload config
hyprctl monitors
  list monitors / names
hyprctl clients
  list windows (find class/title)
hyprctl dispatch \
  movecurrentworkspacetomonitor r
  move active ws right
```

Apply Config Changes

```
cd ~/Repos/personal/laptop
sudo nixos-rebuild switch \
  --flake .#chris-laptop

then, for keybinds/scripts:
hyprctl reload

monitor/scaling changes: prefer
a clean reboot over a reload.
```

Binds defined in `home-hyprland.nix`.
